

Ubistore

A quick analysis of the discounts and the prices on the Ubisoft store.

About the project

```
import scrapy  
from scrapy.crawler import CrawlerProcess
```

```
urls = ['https://store.ubi.com/fr/all-games']
```

```
·

·
```

1

A simple web scrapping program

My very first web scrapping project : it scraps the Ubisoft store and returns the prices and discounts

2

A new experience

I made it in order to gain experience in web scrapping.

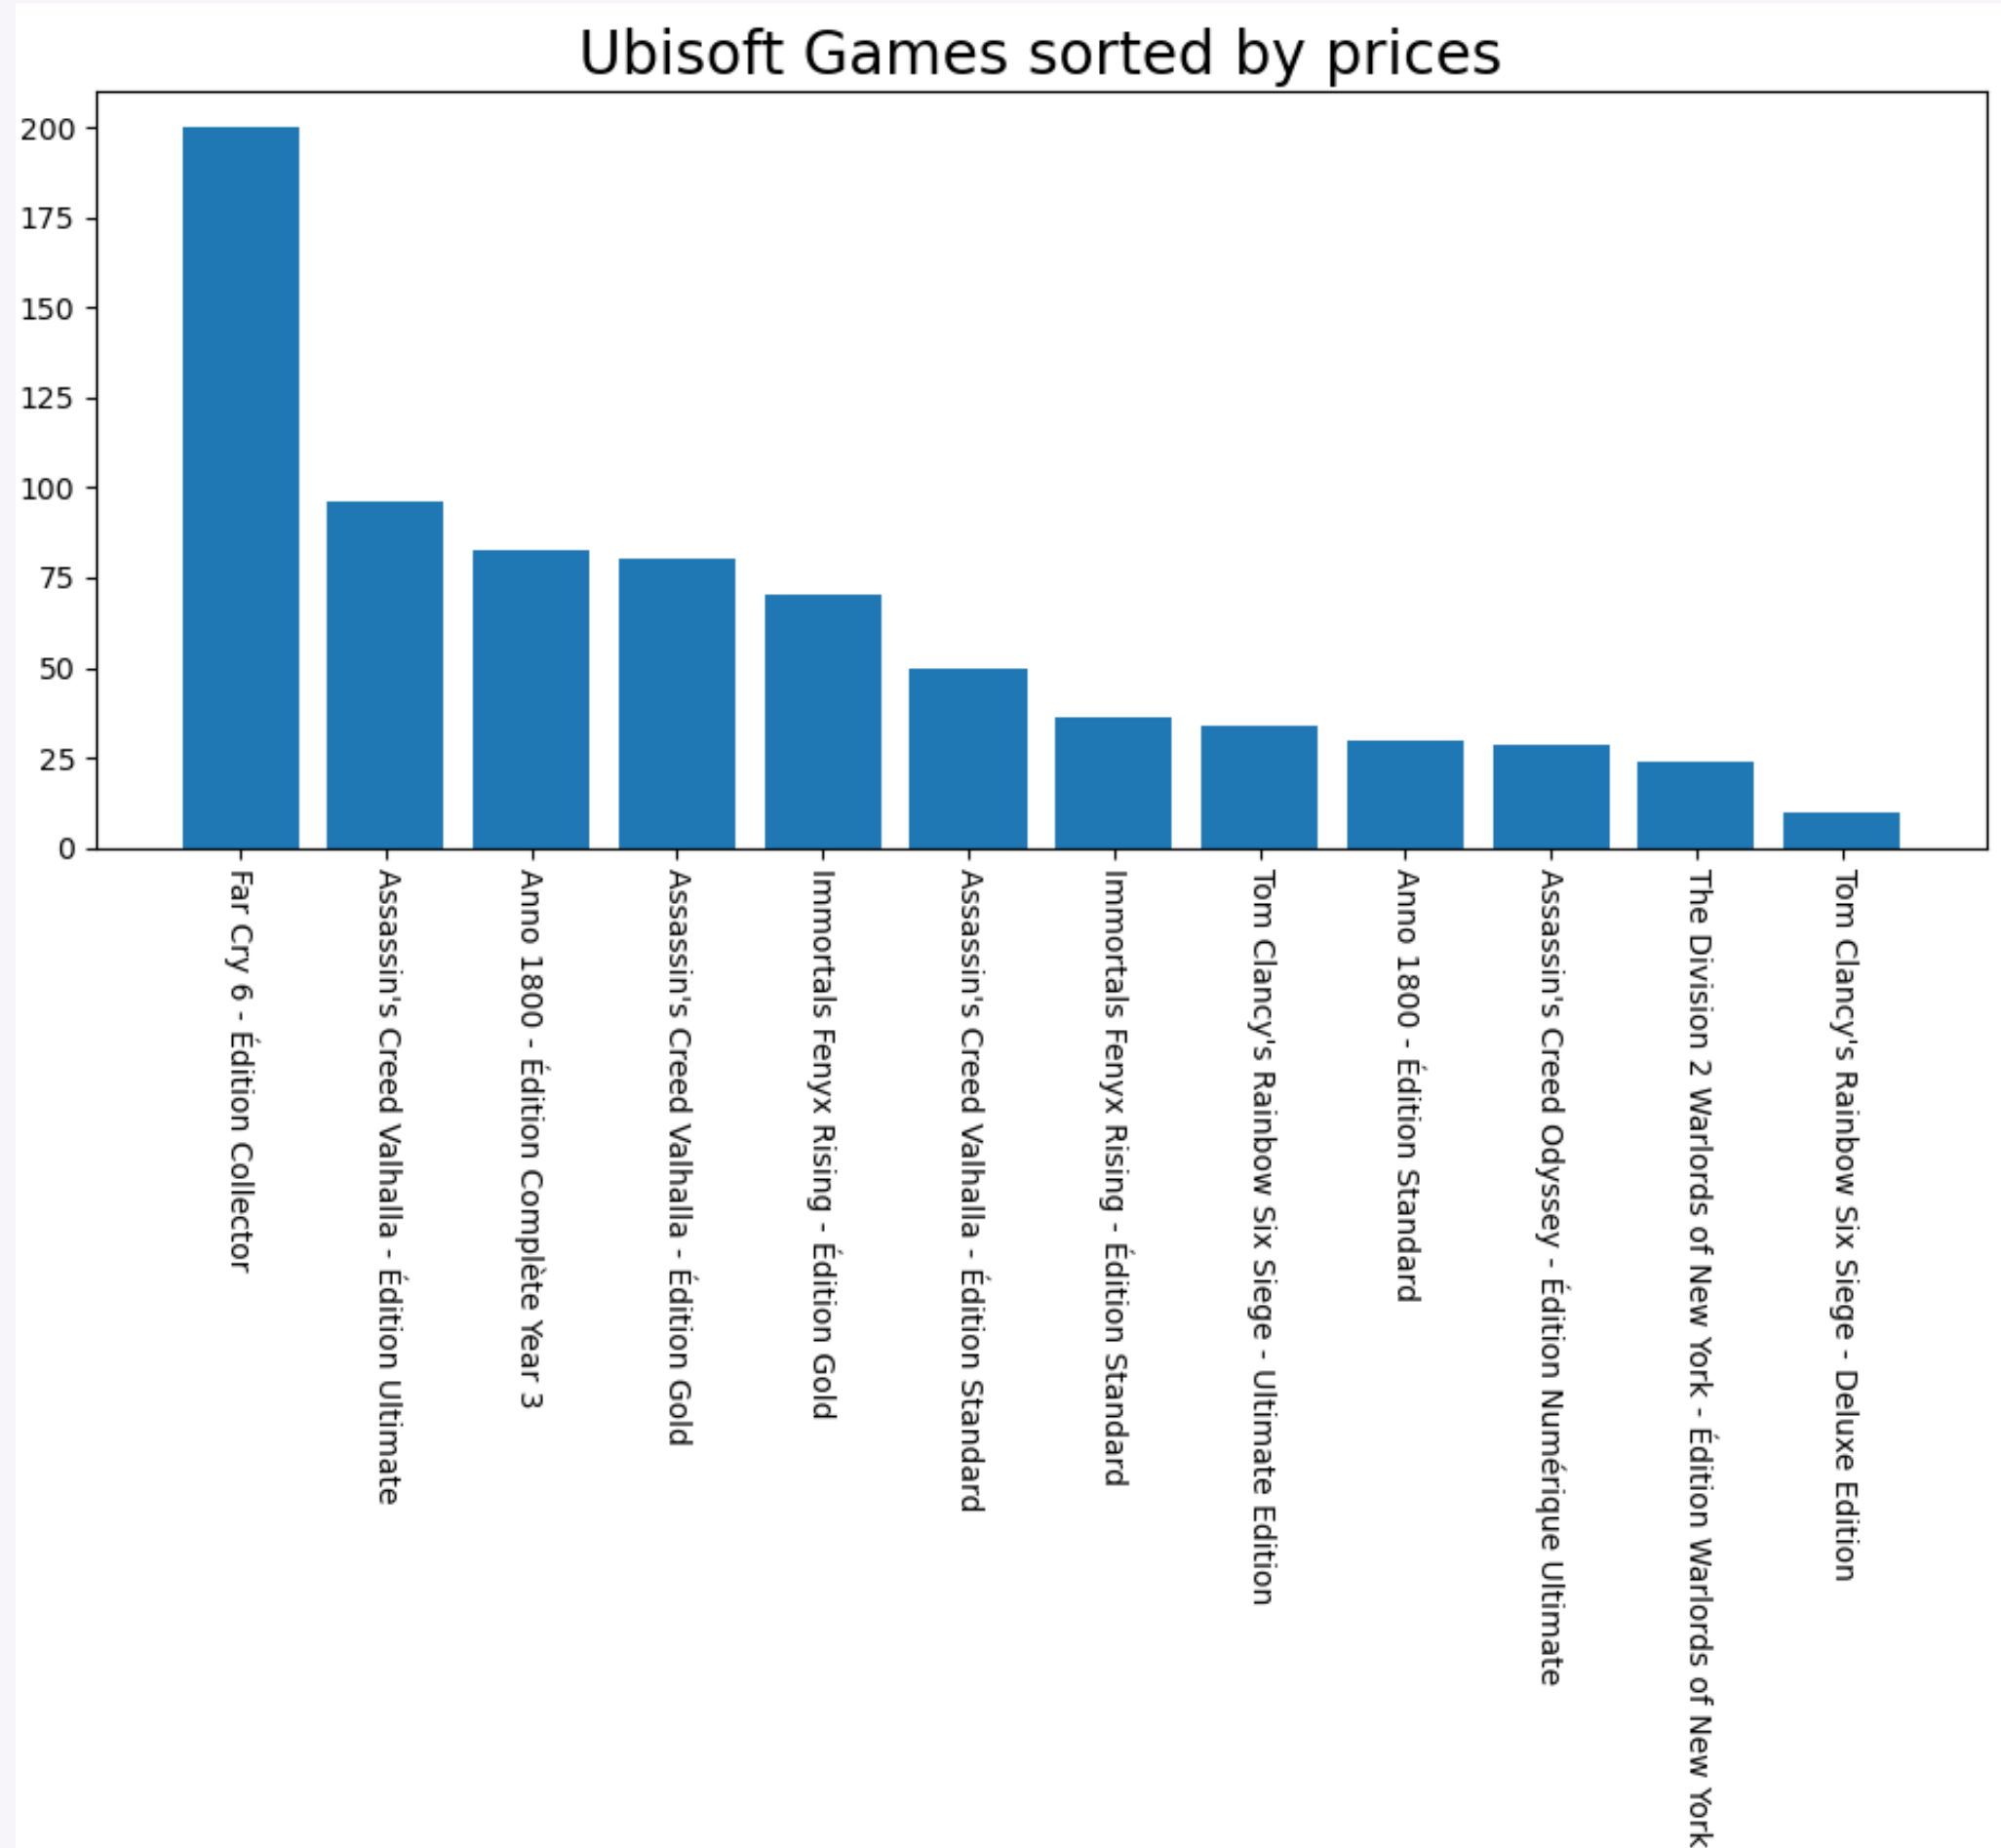

Note : I encountered some troubles while trying to get clean data, I still have some issues to solve.

Games sorted by price

As I collected the data from the first page of the store there are some huge gaps between new games (especially with ultimate edition) and older ones.

Also, I chose to plot only the first 12 games, so that it would be easier to read.

Games sorted by discount

The discount is expressed in percentage on the Y-axis.

Also, I chose to plot only the first 12 games, so that it would be easier to read.
